Karviná plant reports a wage increase of almost 5%

The company and representatives of the trade union ZO OS KOVO ArcelorMittal Karviná have agreed on a wage increase for 2022. Employees of ArcelorMittal Tubular Products Karviná in 2022 will earn on average 4.8% more than in 2021.

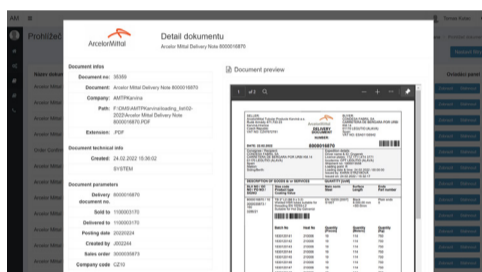

Eco-friendly and smart heating in the paint shop

ArcelorMittal Tubular Products Karviná has installed six new-generation ROBUR hot-air smart units in the hall of paint line 3. The low-emission local gas heating system using ROBUR NEXT R60 units has an efficiency of 94%. The smart units can heat without unnecessary loss, doing so only in the right places at the right times. The installation is part of an overall decentralisation and modernisation of heating in production floors, which will contribute to reducing the carbon footprint and environmental impact of production activities.

A more efficient document management system

The Karviná IT team expanded the use of the Document Management System (DMS) to include archiving of all documents related to sales orders. This includes, for example, quotations sent to customers, orders received from customers, and a signed confirmation of purchase contracts. Documents generated by the SAP corporate system have been automatically stored since March 2021. The DMS is an efficient, transparent, and effective tool for managing and controlling corporate documents.

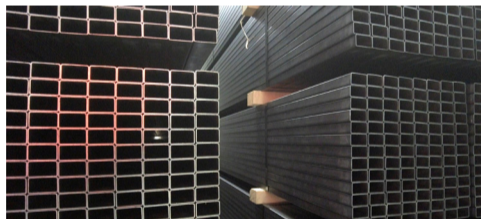

Future plumbers visited the plant in Karviná

Karviná students from the Secondary Vocational School of Technology Karviná visited the manufacturing plant of ArcelorMittal Tubular Products Karviná. The young plumbers became acquainted with the Karviná plant and received practical information from experienced staff.

Product window or "Did you know?"

Thin-walled steel sections under the JÄKL brand have been produced in Karviná for more than a century. They are used not only in the engineering and automotive industries, but also in construction and agriculture. You can find Karviná's "Jäkl steel" literally all over Europe. Its greatest strength is its universally recognised top quality. JÄKL sections account for approximately 70% of the total production of ArcelorMittal Tubular Products Karviná.

Interesting references: Elizabeth Tower (Big Ben), London (UK)

During the planned renovation of the iconic symbol of London in 2017, JÄKL tubes from the ArcelorMittal Tubular Products Karviná plant were used to construct the scaffolding. Completed in 1859, the clock tower is 96 metres tall, and its enormous bell weighs 13.7 tonnes. In honour of Queen Elizabeth II, the world-famous landmark has held the name Elizabeth Tower since 2012.

Karviná's "Jäkl" opens to the public

The Open Day of ArcelorMittal Tubular Products Karviná will take place on Saturday 7 May from 9.00 to 12.00 on the company's premises in Karviná. The programme includes a tour of the production plant, a ride on a train or an entertainment programme and gifts for children.
